

WENBIAO CHEN

Los Angeles, CA ◇ wen.biao.chen2002@gmail.com ◇ (323)620-3768

U.S. Citizen

EDUCATION

University of California, Berkeley

August 2020 - May 2024

B.A. Double majors in Computer Science and Data Science

TECHNICAL SKILLS

Programming Language: Python | Java | C/C++ | Bash | SQL | JavaScript | TypeScript | HTML | Ruby/Ruby on Rails

Frameworks: JUnit | PyTest | React | Node.js | REST | Angular | Django | TensorFlow | PyTorch

DevOps Tools: Docker | Kubernetes | JSON

Developer Tools: Git | MongoDB | Agile (Scrum) | CI/CD | Unit Testing | Figma | Unity | VS Code

PROFESSIONAL EXPERIENCE

DaanMatch

February 2023 - May 2023

Software Developer Intern

Remote

- Developed a mobile app for NGOs in India, designed to support over 10,000 NGOs, enhancing their digital presence.
- Designed a secure RESTful API in PHP for efficient front-end and back-end communication.
- Developed user authentication, registration, and data management system using MySQL, enhancing security and scalability.
- Implemented robust password security using PHP by applying hashing and salting techniques, safeguarding user credentials.
- Adapted quickly to new technologies, enhancing development efficiency, and reducing development time by 20%.

PROJECTS

Gitlet | *Java, Python*

October 2021-December 2021

- Developed a custom version-control system in Java, emulating Git features and managing over 1,000 files.
- Designed an efficient hash algorithm to serialize commit objects, tree objects, and blob objects, and retrieve them.
- Implemented core functionalities (init, add, commit, merge) with support for up to 100 branches and 2,000 commits.
- Wrote comprehensive documentation for system usage and development, improving maintainability and user understanding.
- Refined skills in managing complex data structures, significantly improving system stability and reducing errors.

Representative Finder | *Ruby on Rails*

November 2022-December 2022

- Developed a web app using Google's Civic API, efficiently handling 1000s of location-based queries for finding representatives.
- Integrated News API to provide real-time news articles about representatives, enhancing user engagement.
- Led a team of four through Agile sprints, delivering a high-impact project on time and exceeding expectations.
- Implemented intuitive search functionality allowing users to easily find representatives based on any valid location.
- Proactively identified and resolved numerous bugs, significantly improving application stability and overall user experience.

Idol Katcher | *Unity, C#*

October 2022-December 2022

- Worked with a team of 4 to develop a location-based game using Unity and Mapbox SDK, inspired by Pokémon Go.
- Designed and implemented a turn-based combat system for a range of 28 in-game characters, enhancing gameplay interaction.
- Developed an inventory system in Unity for efficient character management, enhancing player experience.
- Integrated Mapbox SDK to leverage real-time location data and map features, enhancing the game's immersive experience.
- Optimized game performance in C# with efficient algorithms and memory management, resulting in smoother gameplay.
- Conducted user testing to refine gameplay mechanics, boosting engagement and retention.

LeFinance | *MongoDB, Express.js, React, Node*

August 2023

- Led the development of a finance tracking app using the MERN stack from concept to deployment.
- Designed a user-friendly, responsive interface for efficient financial data entry and visualization.
- Implemented RESTful APIs to enable seamless communication between front-end and back-end components.
- Implemented data visualization tools to provide users with insightful charts and graphs for better financial analysis.
- Conducted feasibility studies to identify and resolve financial data management challenges.
- Presented project outcomes and methodologies to peers, demonstrating key findings and solutions.

Movies Research Project | *Python, Pandas, Numpy*

October 2023-December 2023

- Evaluated movie success through regression and causal analysis of actor influence, budget, and star power.
- Utilized Pandas for data manipulation and analysis, streamlining data cleaning and feature engineering processes.
- Analyzed movie data with various regression models (RMSE: 116-132) to predict success and evaluate actor impact.
- Applied causal inference to evaluate how budgets > \$10M impact IMDb ratings using propensity score matching and IPW.
- Optimized data processing with efficient algorithms and large datasets, overcoming scaling and computing challenges.
- Documented findings with visualizations and reports, including regression graphs and causal results, enhancing insight.
